Claims 1-19 are allowed.

The following is an examiner's statement of reasons for allowance:

Independent claims 1, 18 and 19, more particularly define the structure of an electromagnetic field generating elements (in an information recording and reproducing head), which consists of a light source, a substrate with a conductive member which includes a constricting section for narrowing down a current path. A near field is generated at constricting section by applying a light beam to the constricting section. These particulars, combined with remaining claim elements are not suggested in the prior art.
